

Smart Card Evaluation Trainings

With security becoming a critical issue in smart card projects, card issuers and buyers increasingly demand evidence of such security.

The industry has responded by creating card evaluation schemes, which both developers and security staff need to grasp to make sure their products – whether developed in-house or outsourced – meet industry requirements.

Trusted Labs trainings

Trusted Labs addresses this need by offering both high-level courses for security staff, and detailed courses for platform and application developers to smoothly pass evaluation schemes, or for security technicians designing and implementing such schemes.

Assessing Smart Card Security

Objectives:

- Get acquainted with the most common attacks and weaknesses
- Learn how to interpret physical and logical evaluation reports

Duration: 1/2 day

Target audience: all

Java Card™ Platform Evaluation

Objectives:

- Understand Java Card™ Platform Security Guidelines (for example, CAST process)
- Get acquainted with the platform evaluation process
- Learn new security counter-measures

Duration: 1/2 day

Target audience: all

Java Card™ Application Evaluation

Objectives:

- Get acquainted with the platform evaluation process
- Learn new security counter-measures

Duration: 1 day

Target audience: all secure application developers and service providers' security staff
